9 PRIORITIZATION

	C	D
Column Name		
UID	IMPATT.PRIORITY_SNU.T	PRIORITY_SNU.translation
Column Type?	target	reference
What type of data?	integer	string
Prepopulated data?	N	N
Enter or modify data?	N	N
Calculated column?	Y	Y
Linked column?	Y	Y

9.0.1 DATIM Import

The following data points will be imported into DATIM from this section:

- **SNU Prioritization (FY24)** $IMPATT.PRIORITY\_SNU.T$

9.0.2 Instructions

Important notes on Prioritization levels

- *Attained SNUs*: Geographic areas that have achieved $\geq$ 90% (95 x 95) ART coverage in both males and females within the following age bands: <01, 1-9, 10-14, 15-24, 25-34, 35-49, 50+. Getting to >90% ART coverage by both males and females within the target setting age bands at sub-national levels will ensure that the country gets to 95/95/95 overall.

- *Scale-up: Saturation and Aggressive Scale-Up SNUs*: Geographic areas with the highest HIV prevalence and disease burden nationally that have not yet achieved 95/95/95, particularly among the population groups experiencing the greatest burden of disease.

- *Scale-Up: Saturation* SNUs receive intensive PEPFAR support with a target of reaching 95/95/95 at all ages, gender and risk groups, PLHIV on ART by 2024 or 2025.
- *Scale-Up: Aggressive* SNUs receive intensive PEPFAR support with an overall goal of an increased rate of 'new on ART,' but are not expected to reach 95/95/95 by 2024 or 2025.

- *Sustained SNUs*: Sustained SNUs receive a package of services provided by PEPFAR that are different in each country and include passive enrollment via HIV testing and counseling on request or as indicated by clinical symptomology, care and treatment services for PLHIV, and essential laboratory services for PLHIV.

- *Central Support SNUs*: In Central Support SNUs, site-specific activities have transitioned to government or other support. Central Support Districts will continue to receive PEPFAR national support for overarching activities, such as quality assurance and quality improvement (QA/QI) to ensure that patients continue to receive quality services.

- *For Countries that raised their PSNU level*: The OU should use the definitions above to determine their prioritization level at their new future PSNU level (e.g., the one they are using for COP23-FY24-FY25). However, they should not expand their intensity of site level support beyond their prior PSNU level support areas (e.g., the one they are using for COP22-FY23 and before), without explicit Chair approval, and concurrence from S/GAC/PRIME. Additionally, any future PSNUs that contain Scale-Up or Attained prior PSNUs, should likely be categorized into one of those groups. So for example, if Zone A contains Regions 1 (Attained), 2 (Scale-Up Aggressive), 3 (Central Support), and 4 (Sustained). Zone A should be categorized based on ART coverage as Attained, Scale-Up: Saturation or Scale-Up: Aggressive. But that does not mean that site-level support should automatically be extended to facilities in Region 3 or 4 of Zone A, unless there is explicit discussion with with Chair, PPM and DUIT Liaison, and concurrence of Chair and S/GAC/PRIME.

- *Sustained SNUs*: Sustained SNUs receive a package of services provided by PEPFAR that are different in each country and include passive enrollment via HIV testing and counseling on request or as indicated by clinical symptomology, care and treatment services for PLHIV, and essential laboratory services for PLHIV.

- *Central Support SNUs*: In Central Support SNUs, site-specific activities have transitioned to government or other support. Central Support Districts will continue to receive PEPFAR national support for overarching activities, such as quality assurance and quality improvement (QA/QI) to ensure that patients continue to receive quality services.

- *For Countries that raised their PSNU level*: The OU should use the definitions above to determine their prioritization level at their new future PSNU level (e.g., the one they are using for COP24-FY25-FY26). However, they should not expand their intensity of site level support beyond their prior PSNU level support areas (e.g., the one they are using for COP23-FY24 and before), without explicit Chair approval. Additionally, any future PSNUs that contain Scale-Up or Attained prior PSNUs, should likely be categorized into one of those groups. So for example, if Zone A contains Regions 1 (Attained), 2 (Scale-Up Aggressive), 3 (Central Support), and 4 (Sustained). Zone A should be categorized based on ART coverage as Attained, Scale-Up: Saturation or Scale-Up: Aggressive. But that does not mean that site-level support should automatically be extended to facilities in Region 3 or 4 of Zone A, unless there is explicit discussion with and concurrence of Chair.

1. Review the column "SNU Prioritization (FY24)" which will indicate prioritization levels set in COP23 for each PSNU.

2. Review "SNU Prioritization (FY24)" and adjust as appropriate for COP23 programming. This is currently set to populate with the same level of prioritization that was referenced in step 1. Overwrite this column to set new levels of prioritization based on the list below. This column should only be populated using integers 1-8 and "M", "NA", or "Not a PSNU", as follows:

   - 1 = "Scale-up: Saturation"

   - 2 = "Scale-up: Aggressive"

   - 4 = "Sustained"

   - 5 = "Centrally Supported"

   - 6 = "Sustained: Commodities"

   - 7 = "Attained"

   - 8 = "Not PEPFAR Supported"

   - "M" = "Military"

   - "NA","Not a PSNU" = "INVALID"

3. Review the column "FY24 SNU Prioritization Translation" to ensure the prioritization level for each PSNU is correct. To make any changes, only edit the column "SNU Prioritization (FY24)" from Step
